PROLOGUE

The General Plan expresses the visions and goals of Danville citizens for the future of our community. The Plan contains goals, policies, and programs to guide the Town's decision makers toward this vision. Our goals have been shaped by four basic principles:

1. The small town way of life enjoyed by Danville residents should be reinforced, preserving present aesthetics and other community qualities.
2. The quality of life within existing developed areas of the community should be protected.
3. Orderly and appropriate growth must be coupled with the ability to maintain high quality public facilities and services.
4. Harmony should be achieved between Danville's development and its physical setting by protecting natural resources, avoiding development of hazardous areas, and preserving critical open space areas.

These principles are the foundation of the Plan and are the basis for a strategy to preserve the quality and character of our Town as the Tri-Valley region and Bay Area continue to grow.
